EDUCATION

Mapua University | Intramuros, Manila

September 2019

Bachelor of Science in Electronics Engineering

TECHNICAL SKILLS

- **Programming / Scripting:** Python, Bash, Perl
- **Containers & Orchestration:** Kubernetes, Docker, Containerd
- **Infrastructure as Code / Automation:** Ansible, Terraform, Jenkins, GitLab CI, Github Actions, ArgoCD
- **Virtualization Platform:** Proxmox, OpenStack, KVM
- **Monitoring / Observability:** Prometheus, Grafana, Alertmanager, Zabbix
- **Cloud Platform:** AWS, GCP (GCE, GKE), Cloudflare (DNS, Tunnels, Workers, R2, CDN)
- **Operating System:** Linux (RHEL-based, Debian-based)

EXPERIENCE

Self-Employed

July 2025 - Present

Freelance Consultant

- Provided IT consulting and technical support for small businesses and individuals, delivering tailored infrastructure solutions aligned with business requirements.
- Implemented and maintained systems for a dental clinic, including records workflow support, local network setup, and backup strategy planning to improve reliability and continuity.
- Designed and deployed network infrastructure for cafés and hotels, including secure Wi-Fi setup, segmented access, and captive portal integration for guest authentication.
- Developed a custom OTP-based Wi-Fi captive portal for guest access management, improving access control and user onboarding.
- Designed and installed CCTV surveillance systems for residential and small business environments, including camera placement planning, network configuration, and remote monitoring setup.
- Deployed local NVR (Network Video Recorder) solutions using Frigate NVR with AI-based object detection for smart monitoring and motion alerts.
- Delivered network security hardening and connectivity improvements for client environments, including router configuration and access control.
- Designed and prototyped a remote-controlled vehicle gate system for a private client, integrating electronics, control logic, and automation to meet functional and safety requirements.

Samsung R&D Institute Philippines (SRPH) | McKinley Hill, Taguig

October 2023 - October 2024

DevOps Engineer

- Monitored infrastructure and application health using Prometheus, Grafana, and Alertmanager.
- Developed, coordinated, and administered Kubernetes infrastructure.
- Built CI pipelines for package builds, vulnerability scanning, and code quality checks.
- Implemented GitOps-based CD workflows using ArgoCD for automated application deployments to Kubernetes.
- Managed and provisioned virtual machines in OpenStack and Proxmox using Terraform/OpenTofu.
- Built and maintained RPM packages and QCOW2 images.

- Automated server provisioning and configuration using Ansible.
- Resolved Jira tickets and troubleshoot customer production issues.
- Migrated in-house applications to Docker containers and Kubernetes.
- Investigated and resolved production environment issues and application bugs.
- Created proof-of-concepts (PoCs) for new container orchestration technologies.
- Managed Linux systems administration and automation through Bash and Python scripting.

Quick Suite Trading | Kuala Lumpur, Malaysia

March 2023 - October 2023

DevOps Engineer

- Monitored infrastructure and application health using the Prometheus-Grafana stack.
- Developed custom Prometheus exporters to monitor MariaDB database instances.
- Administered and coordinated Kubernetes infrastructure operations.
- Automated deployments using Ansible and GitLab CI, and managed infrastructure as code with Helm.
- Assisted developers in building and deploying applications on Kubernetes using Docker and Podman.
- Deployed updates and fixes while providing Level 2 technical support.
- Built internal tools to reduce operational errors and improve customer experience.
- Installed, configured, secured, troubleshoot, and maintained UNIX-like operating systems.
- Administered user accounts, permissions, and access controls.

Amkor Technology, Inc. | Alabang, Muntinlupa

November 2021 – March 2023

Systems Engineer (Contract via KMC Solutions)

- Administered and coordinated Kubernetes infrastructure operations.
- Led the development of CI/CD pipelines for in-house and open-source projects.
- Built and deployed Docker images for a workflow automation platform (ProcessMaker) in production environments.
- Deployed, configured, and maintained containerized Zabbix across multiple sites.
- Automated Zabbix operations, including agent deployment and housekeeping, using Ansible.
- Developed Perl-based scripts for monitoring an enterprise integration platform (Software AG webMethods).
- Migrated a managed file transfer platform (GoAnywhere MFT) from Windows Server to Oracle Linux 8.
- Deployed, configured, and maintained a managed file transfer platform (GoAnywhere MFT) and secure gateway infrastructure across multiple sites.
- Deployed, configured, and maintained an analytics platform (TIBCO Spotfire) alongside Apache NiFi across multiple sites.
- Set up, configured, and maintained Red Hat JBoss in development and production environments.
- Performed Linux systems administration, including OS installation, troubleshooting, patching, software upgrades, and system hardening.
- Automated routine operational tasks such as system hardening, backups, and housekeeping.
- Managed incident report, troubleshooting, and day-to-day issue resolution for users and customers.

Amkor Technology, Inc. | Alabang, Muntinlupa

July 2021 - November 2021

Network Operations Center Engineer (Contract via KMC Solutions)

- Proactively monitored servers using Zabbix, Hobbit/Xymon, PRTG, and Jennifer APM.
- Monitored network devices and infrastructure using SolarWinds.
- Monitored IBM AS/400 systems, including resource utilization, error events, and data integrity.
- Initiated, managed, and resolved incident tickets.
- Performed daily and weekly database backup operations.
- Generated weekly availability reports for servers and network infrastructure.

PROJECTS

Home Lab Infrastructure Platform

- Built and maintained a self-hosted infrastructure platform using Proxmox, Kubernetes, Terraform and Ansible for service hosting, automation, and infrastructure experimentation.
- Managed a public-facing VPS for reverse proxy, secure ingress, and self-hosted services, including email and external service exposure.
- Deployed and maintained reverse proxy and ingress solutions using Caddy/Pangolin for TLS termination, routing, and public access management.
- Integrated Cloudflare Tunnels, DNS, and edge services for secure remote access and service exposure.
- Implemented observability, containerized workloads, and self-hosted services to simulate production-like infrastructure patterns.
- Documented architecture, implementation details, and lessons learned through technical blog posts.

GCP / Cloudflare Infrastructure Lab

- Built and maintained a personal cloud infrastructure lab using Google Cloud Platform (GCP) and Cloudflare for infrastructure provisioning, edge networking, and cloud architecture experimentation.
- Provisioned infrastructure with Terraform and deployed cloud-native workloads using GCP services such as GKE and GKE in a non-production environment.
- Implemented Cloudflare services including DNS, Tunnels, Workers, and R2 for edge routing, secure remote access, lightweight serverless workloads, and object storage.
- Tested networking configurations, infrastructure automation patterns, and service integration across cloud and edge environments.
- Documented architecture, implementation details, and lessons learned through technical blog posts.

MailMoto

- Fullstack containerized mail server (SMTP, IMAP, DMARC, DKIM, SPF, Anti-spam, etc)
- Repo: github.com/mcbtaguiad/mailmoto

OTP Capture Portal

- OTP authentication captive portal for Wi-Fi guest access management.
- Repo: github.com/mcbtaguiad/otp-capture-portal

LICENSE & CERTIFICATION

Registered Electronics Engineer (PRC)

License No. 00856**

Cisco Certified Network Associate (CCNA)

Issued June 2021 - Expires June 2024
